

ONLINE FOOD ORDERING SYSTEM

This project/web page defines the availability of food restaurant and their food through online portal. In today era the word online refers to ease of work which concludes the project of online food ordering. The main objective of online food ordering system can be defined as a simple and convenient way for customer to purchase food online, without having to go to the restaurant.

This system is enabled by internet – it is the internet that connects the restaurant or the food company on one hand, and customer on the other hand.

Therefore, as per this system, the customer visits the restaurant's app or website browser through the various food items, combos, and cuisines available there and goes ahead and select and purchase the items he/she needs.

Payment for such online orders can be made through debit cards, cash, cod, upi etc.

The project will contain 5-6 pages which are interlink with each other. The overall design will contain the city, area address, restaurant available, cuisines available, popular restaurants around the area, common cities, discount coupons, most popular discount, and the popular food available.
